Software Development(Mobile, Web & Desktop) challenge

Pick one of the 2 challenges.

a) Develop a single page application that consumes the chucknorris.io API. The application should have categories consuming the same API. When a category is clicked, load the content coming from the API e.g. category science - All arrays Chuck Norris declares are of infinite size, because Chuck Norris knows no bounds.
There is no required design from us, however build the single page application using **react.js** and use **github pages** to host the application. Submit your solution by sending us a link to your github-hosted application.

b) Build a simple CRUD application using ExpressJS and MYSQL. Submit your solution by sending us a link to your github repo. Include an exported database in your project directory for testing.

Note: Github is free, create an account if you do not already have one.

Be ready for code review during the interview if shortlisted.
